Mr. Tree Planter

I want to have a short talk with you about trees this Spring. I have several thousand Peach, Cherry and Plum Trees, 2 to 3 and 3 and 4 feet high. They are fine trees, true same as I must tell you. I sell my man money white 'Cherry Orchard' of 50 or 100 trees, as every farmer ought to have that many trees. In Plumas I have all the big ones that will bear in the country and I will not sell a single tree to a man that will plant 50 trees and let me select the kinds. It takes 50 or more trees to be successful as they need grouping. Also the great Keeper Apple, the one that does so well for the South, wees on the trees longer and has not failed to fruit since it commenced in O. T., some 9 years ago. And the genuine Winter Bartlet Pears the trees have not blighted so far and the fruit sells at better prices than oranges at Christmas time and all through January. A large pear—a money maker. I have been two years satisfying myself as to the pear and have got to where we dare to plant it largely on our New Mexico land. The trees are some of the finest I have seen. The varieties are worth the money. With these trees you can have large luscious pears at Holiday time to treat your friends with. I want you to give me a trial order I can serve you right. I have a good line of shade trees and other fruit trees. Roses and Plants. Can handle Evergreens so they will grow. Write me sure. Do not fool yourself by not doing so. I can do as well as any agent. Don't forget that.

The Original Keeper Tree

I can show you one that has stood for 37 years, and without care. Last year it produced 16 bushels of apples. This apple has made its way all over the southwest as it was the only one that kept as long as I can find out, that stayed on the tree until picking time—the fruit is good sells with the best of them. It has been faked by agents and some varieties of it have been cut out, but people are warned that they pay good money for them through agents. Do not buy of any man unless he can show proof from me. They are not quite as good as some others. But the worth of the tree is not what you buy. But when the tree produces then it counts. I will not have a large supply of them this Spring—this season we are planting them in New Mexico and I can not make up large orders but they are the best apple out. If you are planting Southwest, plant the KEEPER.

Accompanying out shows how we handle evergreens. They are round trees and perfect in every way and as to grow as is possible to grow them. I have hundreds of them for years that way. Of course they cost some more, but the only way to get them, and in that way I have built up a large trade on them. I have a large supply of the best kinds of Evergreens, besides several other kinds of fancy trees and flowering trees and weeping trees, and Banyons, Ruscus and Downy Mulberry, Linden Holly, Yaupon, Sycamore, Linden, Maple, Texas Elms, and several others. Black Locust by the hundred thousands. So write me care of my office and I will send them and beautify your homes. Do not forget to ask me about Roses. Plant some of these beauties. Do not pay an agent two pieces. Get them here fresh from the ground.

What Others Say About the Keeper Apples

Kingfisher County, Okla., May 28, 1917.

Mr. A. T. Remer, Proprietor.

Dear Sir: As you have asked me to tell you what I think of the Keeper Apple I will say this of all the best varieties of apples that I have grown, in my 50 acre orchard I regard the Keeper as being the best in every way. The tree is a strong grower with dark green leaves and good color. I have on my other tree I have in my orchard, and it comes into bearing as soon as any other variety and produces apples of the best quality. They are free from either of the above kinds. I am expecting to get another orchard in the fall, or spring, and if I do they will be Keepers. Respectfully yours, Mr. L. Ingle.

The Aulne Nursery, A. T. Remer, Proprietor.

Aulne, Kansas.
